

Accurately measure and compare the utilisation and occupancy rates across your workspace.

Compare teams or depts
Make side by side comparisons of average and peak utilisation of business units, departments or teams.

Compare by asset type
The utilisation of different workplace asset groups such as desks, phone booths, collaboration booths and meeting rooms, over any single given time period.

Compare days of the week
View utilisation across days of the week of multiple tags to identify opportunities for changing workplace practises.

In the post COVID workplace it is expected that some workplaces will bring its employees back in a 'shift' pattern in order to maintain social distancing and provide employees the safest route back into the office.

The compare function can help you identify peaks and troughs of how different departments use their space, as shown in the image above.

When evaluating a recent office refit or planning a new office, it is important to consider the provision of different furniture types and workspaces made available for employees to do their jobs.

Through analysing patterns of how different work points and office assets are used at different times it will be easier to plan for future requirements.
