

Environmental sensors can quickly gather data to show if you have enough fresh air circulated.

ENVIRONMENTAL SENSORS

Maintain the health and wellbeing of employees

Gathers CO2, Temperature & Humidity data
Understand the health of your buildings

Optimise HVAC systems

Efficiently adjust ventilation as needed to circulate fresh air

Balance air flow as occupancy increases

Anticipate how much fresh air you need circulated as office occupancy increases

Indoor air quality software

Data at your fingertips

Have the flexibility to manage the health of buildings efficiently to keep employees safe in the office.
